

ESCAPE THE ISLAND

Teams stranded on an island must learn to work together to complete survival skill challenges and then signal a passing ship to be rescued.

How it works

Teams are stranded on an island. To escape they must spot a passing ship and successfully send it a signal. While they wait, they need to adapt to island life to survive. The island represented on a tablet-based app is divided into nine zones. Each zone has a series of challenges focusing on water, weather, first aid, building shelters, signalling etc. They must move through all zones within a limited time frame gaining points for their team. Caution is required as once they leave a zone they cannot return. Teams eventually determine the name of the ship, the time when it is passing and signal it for rescue.

Learning outcomes

To survive the island teams must develop a strategy and apply it with agility. Knowing when to move to the next zone and when to linger also requires active communication and consensus decision making. Teams have fun learning to learn together, gaining knowledge of real survival skills. Creative thinking and problem solving skills are required as individuals play to strengths for the benefit of the team. Limited time and resources put team dynamics to the test challenging them to look for opportunity.

Key business benefits

- ✧ Collaborative problem solving
- ✧ Thinking outside the box
- ✧ Decision making under pressure
