

INFINITE LOOP ONLINE

Lean management is put into practice in a fun, fast paced virtual team building activity which has been re-designed specifically for remote teams. The game can be played both collaboratively and competitively to suit the dynamic of your day and desired learning outcomes, creating a truly wow experience for your remote working teams.

How it works

Your team is a specialist 'Remote Virtual Hacker Unit', called in to complete a special secret mission. A young man playing a virtual reality game has been absorbed into the cyberspace world, and is trapped there. Your mission is to go back and forth between the virtual and real worlds, finding clues to release the gamer, and help him return to the real world. Using our online video conferencing tool, coupled with our Remote Infinite Loop platform, one team member at a time will be faced with virtual puzzle challenges, and must describe them to their team members within their online conference breakout room. These teammates must work together to decipher and communicate the solutions, unlocking the doors inside the cyberspace maze, and help the trapped gamer escape.

Learning outcomes

This is a powerful lean management business game, based on real-time collaboration and communication. The more precise the description of the puzzle, the faster the teammates within the online conference breakout room find the solution. Interactive learning, combined with continuous feedback and improvement, helps the teams solve problems in more efficient ways. As every team role is swapped once each puzzle is completed, players must really stay switched on and develop their own communication techniques as the game progresses. The Infinite Loop Online is a versatile and powerful tool for debriefing on complex issues affecting modern businesses working with remote teams, employing agile methodologies.
